- Return 1 or Return 0 means what and the main returns to whom?

Return 1; → Returns the value 1 to the calling function. It usually means True, Found, or success.

return 0; → Returns the value 0 to the calling function. It usually means False, Not found or Failure.

main() returns to whom?

In c/c++, the main() function returns its value to the Operating System (OS). return 0; indicates that the program executed successfully. In Java, main() is void, so it does not return any value.
